WORK EXPERIENCE

The Walt Disney Company – Disney Advertising

2025 – Present

Senior Software Engineer

Inventory Forecasting Platform

- Engineered the data platform forecasting ad inventory availability for Hulu, Disney+ and ESPN, building Spark pipelines on Databricks, leveraging time series and ML forecasting models, and the forecast APIs sales and ad operations rely on to price and reserve \$5.5B of inventory
- Lead engineer for the IFP Portal, the Spring Boot / React application inventory and account managers use daily to run availability lookups against those forecasts, owning roadmap planning, design and delivery for the squad
- Designed a self-service forecast adjustments system, replacing an engineer-run script with a governed upload, validation and Databricks promotion flow that lets planners correct forecasts without engineering involvement
- Migrated production forecasting pipelines from Airflow to Databricks and Unity Catalog, and added GDPR consent handling across the data platform to support the Disney+ European ad server migration
- Stood up the ML inference service for demand forecasting and led root cause analysis and remediation of production incidents, improving forecast API reliability and observability

Mercedes Benz Research and Development North America

2020 – 2025

Senior Software and Data Engineer

Data Platform

- Architected multitenant Kafka platform supporting all telemetry and real time analytics for over 32 million vehicles worldwide
- Designed high volume ETL pipelines for internal data teams, leveraging Apache Flink SQL to enrich data with generative text from large language models (LLMs) and supporting machine learning use cases
- Spearheaded development of infrastructure automation for data teams using infrastructure as code, maintaining strict data privacy in a multi-tenant environment
- Led development of data discovery customer web interface, reducing silos within the company and enabling teams to securely request access to data

Mercedes Benz Mobile App

- Led backend engineering for vehicle service appointment scheduling in the Mercedes Benz mobile app, directing feature development with stakeholders, mobile and UX teams to reach nearly 1 million users and drive over 3 thousand new service appointments monthly

EDUCATION

Purdue University

2016 – 2020

Computer Engineering

- CPU Design and Architecture - Designed and implemented a multicore CPU with a coherent cache and pipeline in SystemVerilog running on FPGA
- Operating Systems and Compilers - Implemented an operating system from scratch in C (lock/mutex system, memory allocation, message passing) and built a C++ compiler with abstract syntax tree, intermediate representation and bison parser

SKILLS

Databricks / Spark

Kafka / Flink

Data Modeling

ML Operations

Java, Python, Go

Azure / AWS

SQL / Unity Catalog

Distributed Systems

CI/CD & Kubernetes

React / TypeScript
